

## Lab - Calculate IPv4 Subnets

### Objectives

Part 1: Determine IPv4 Address Subnetting

Part 2: Calculate IPv4 Address Subnetting

### Background / Scenario

The ability to work with IPv4 subnets and determine network and host information based on a given IP address and subnet mask is critical to understanding how IPv4 networks operate. The first part is designed to reinforce how to compute network IP address information from a given IP address and subnet mask. When given an IP address and subnet mask, you will be able to determine other information about the subnet.

- 1 PC (Windows with Internet access)
- Optional: IPv4 address calculator

**Reflection Question**

Why is the subnet mask so important when analyzing an IPv4 address?

It tells you the network portion and helps to identify the host portion. Without the subnet mask, the network and host portion cannot be identified.
